Weather Alert Update | CodeRed Service Discontinued

Severe Weather Awareness • Staying Informed • Updates

Important Update: CodeRed Alerts Are No Longer Active

The CodeRed service previously used for location-based severe weather notifications is no longer active. The ERC is working to identify a replacement so employees can continue to receive timely, reliable alerts.

What changed

CodeRed is no longer sending alerts. Please do not rely on CodeRed for tornado or severe weather warnings.

What the ERC is doing

- Evaluating alternative alert services and notification methods.
- Coordinating with site leadership to ensure alarms and shelter procedures remain clear and consistent.
- Sharing an update as soon as a new service is selected and activated.

What you should do now

- Enable Wireless Emergency Alerts (WEA) on your phone (Emergency Alerts / Government Alerts).
- Use a trusted weather source with push notifications (e.g., local TV meteorology app or a major weather app).
- Follow official National Weather Service alerts and local forecasts when severe weather is expected.
- Review your nearest shelter location and plan to move quickly during a warning.

At work during severe weather

ERC members will continue monitoring conditions and will communicate when sheltering is needed. Always follow site alarms, supervisor directions, and official warnings.
